

ANHYDROUS AMMONIA KIT SR 200

A complete respiratory protection kit with a convenient and individual storage box. An excellent choice in fertilization and refrigeration industry.

- Full face mask with large PC visor for greater field of vision
- Superior face seal providing a very high protection factor
- Unique inhalation and double exhalation valve design offering extremely low breathing resistance
- Integrated outer and inner mask with interior vents
- Non-allergenic, FDA approved silicone material
- 6-point head harnesses for evenly distributed fit
- Breathable mesh head harness for comfort
- High-efficiency P100 particulate filter offering ten times more filter effectiveness than required by NIOSH. Each filter tested for 99.997% filter efficiency
- Prefilter system designed to capture larger particles while preventing premature clogging and extending the life of the P100 particulate filter
- The included chemical cartridge can be used by itself or stacked with the included P100 particulate filter based on user's application
- Chemical cartridge with an extra large surface area providing high gas absorption capacity
- Easily fit tested and seal checked
- NIOSH approved

Sundstrom's comfortable full face mask respirator allows the wearer to work longer with less effort, better protection, and at less cost.

One Anhydrous Ammonia Pack includes everything you need.

Better Protection

The Sundstrom P100 particulate filter offers an efficiency level of 99.997% which is ten times higher than NIOSH requires at 99.97%. Therefore, the Sundstrom P100 filter is 10 times more effective and offers 10 times better protection.

Greater Comfort and Less Breathing Resistance

The Sundstrom flexible and unique design of masks provides a great fit for most face shapes and sizes. Its cupped shape offers a tight seal and outstanding comfort. Coupled with an extremely low breathing resistance, the Sundstrom mask is a favorite on the market.

250% More Air Flow

Our full face mask respirator and P100 filter allows breathing rates of more than 250 liters per minute compared to most

competitive products which generally allow only 95 lpm. This means the Sundstrom user can handle much heavier work loads and avoid early fatigue.

Adaptable System

The SR 200 full face mask respirator can be used with our P100 filter and / or a range of chemical cartridges which can be "piggy-backed" together.

Far Less Cost Over Time

The SR 200 is an easy to maintain reusable mask. Our distinct prefilter system prevents premature clogging of the particulate filter and extends its life up to 5 times compared to many competitive products.
